Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 7, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over George in view of Homer (U.K. Pat. 2224824).

George discloses the invention substantially as claimed. However, George does not disclose that the burner head assembly (50, Fig. 6) includes a plurality of flame retention plates.

Homer teaches the use of a burner head assembly comprising a plurality of changeable flame retention plates for the purpose of producing ports of different shapes so that the combustion characteristics of the burner head assembly may be readily changed (note page 2, lines 7-10 and/or page 5, lines 11-13).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the burner head assembly of George such that the burner head assembly is formed of a plurality of changeable retention plates such as taught by Homer in order to produce ports of different shapes so that the combustion characteristics of the burner head assembly may be readily changed.

Art Unit: 3749

3. Claims 3-6, 8-12, and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Each of Ryno and Cummings is cited to show a fuel burner assembly having a flame retention burner head.
